ELECTRONIC DEPOSIT VERIFICATION SYSTEM

EDV 106

ELECTRONIC DEPOSIT VERIFICATION SYSTEM

The ENV-106 provides your customers with a secure deposit system that will detect if a drop is actually made and simultaneously photograph who made the deposit and the item that was deposited (optional). The ENV-106 records the transaction information including time and date and issues a receipt to the depositor. Your customer walks away with piece of mind knowing that the deposit was acknowledged and is secured. Balanced rotation design permits ease of manual operation.

- Photographs the person making the deposit
- Detects the the item (deposit) dropped as it passes through the Deposit Verification Sensor
- Photographs the item (deposit) dropped to protect against ghost deposits
- Provides a customer receipt of the transaction showing that the deposit was detected
- Electronic record of the time, date and transaction information
- Can be integrated with existing camera system and reviewed remotely
- Software can be stand alone or integrated into most teller platform software
- Generates reports of all deposit information for internal use
